Patient DANCI ,MARIUS DOREL

Dear Narcisa Tancu,  
 the pat has a large invasive tumor remnant in the skull base ,mainly in the sphenoid sinus ( OPerable )  
 AND the right cavernous sinus( INOPERABLE )  
 2(?) operations had been peromed before  
 1.Transcranial (18.5.09) -followed by a transitory hemiparesis  
 2.'nasal transsphenoidal?(transferred [25.6.to](#) neurosurgery..)  
 Which was the histological diagnosis?Pituitary adenoma?(meningioma?chordoma?)  
 How is the hormonal situation? hormone excess(frontal sinus looks like acromegaly.Growth hormone? Prolactin? Hypogonadism,hypothyroidism?  
 Does he take hormones?  
 Right eye still amaurotic or a little better`?  
 movement disturbed? double vision?

Depending on the kind of tumor next steps will be :  
 Transsphenoidal op with diminishing of the tumor volume(mainly in the sphenoid sinus)  
 tests for medical/hormonal treatment  
 Initiation of radiotherapy-maybe Gamma-Knife

Hospital stay for planning and sugery 2 weeks  
 Total costs for hospital stay about 38 000€,  
 (maybe I will need help from an ENT during surgery)  
 Other kind of tretament has to be calculated later,depending on the final diagnosis.  
 Pat can come to the INI from Jan 11,2010 onwards.  
 Best regards.

Rudolf Fahlbusch  
 Director Endocrine Neurosurgery and Intraoperative MRI
